

Product Information Sheet

Holding Tank Digester

Product Description

Utilises specific microbes and friendly bacteria for treating Holding and Septic Tanks

Core Benefits

- Product specific microbes establish effective self-renewing biofilms deep inside inaccessible Blackwater Tanks
- The product microbes break down organic matter including ammonia, volatile fatty acids, and proteins, long after product application
- Natural, safe, and effective way to combat organic waste and odour problems
- Safe on all surfaces
- Reduces CO2e by up to 85%
-

How does it work?

Holding Tank Digester product that contains a range of carefully selected and acclimatised micro-organisms. These are all naturally occurring strains which have not been modified in any way. Use Holding Tank Digester on a regular basis to replenish the microbiological population in the holding tank. This turns blackwater into greywater over a period for then safe disposable.

Product Information Sheet

Holding Tank Digester

Directions for use

This treatment will only work if you have a Holding Tank onboard and can close the Seacock.

Drop two sachets into the holding tank either through the deck suction outlet or directly into the holding tank. The sachets will dissolve in the existing liquid within 5 minutes releasing the specific microbes and friendly bacteria.

To help accelerate the process we suggest, if possible, a weekly treatment initially for the first 4 weeks, then monthly thereafter. This will help to treat any legacy organic material build up.

Environmental

Local UK Production and supply chain reduces CO2e impact from transport

Technologies are renewable and sustainable, sourced from plant extracts, fermentation, microbes and manufacturing by products reducing CO2e and environmental toxicity.

- Readily biodegradable (99% over <28 days).
- 0% manufacturing waste.
- Not tested on animals.
- Excludes all 'watch list' raw materials.
